Plants and IOT, PEMF Qi generation as Plant Energetics, an Autism case study.

Dr Bheemaiah, Anil Kumar, A.B Seattle W.A 98125 miyawaki@yopmail.com

Abstract:

Cuddlies($^{\text{TM}}$) and sympathetic plants are explored as a therapy to complete cuddle therapy, with a human aspect, Cuddlies($^{\text{TM}}$), a plushie based interpretation of the imaginary, designed from cartoons created by the patient, is proven with IOT, Qi and IFTTT or RAVATTT to complete the therapy of cuddles and hugs. The curative aspect of human company and relationships. Technology assists in this with the integration of conversational UI and plushies, thermoregulation and microclimate to ancient wellness therapy. A future application as proof of the therapy in Autism is described.

Keywords: Cuddle Therapy, Plants and Cuddlies(TM), IOT, Warmth, Autism

What:

We consider plant energetics in plants with a strong plant-human symbiosis and explore plant-based energy medicine in a Qi-based framework, where a Sempervivum plant is used in conjunction with a Cuddlie(TM) for energy-based curation in Autistic patients.

How: Cuddle Therapy is popular as an integrative therapy,(Cullen and Barlow 2002; Finke 2019; Yamada 2016; Wylie 1990; Pedersen 1992; Underwood 1999; Rosen 2017; Grader 2016; Morrison 2011) for social wellness and wellness therapy, in this paper we explore the role of Cuddlies(TM) combined with a sympathetic plant like the Sempervivum, with Qi coils and Air Pots integrated to the cloud with IoT. Using Sonoff controllers and IFTTT or RAVATTT, we make the plant communicative, more than a cuddle buddy.

In esoteric meditation, chakras are defined as the integration of the astral and causal planes, in plant neurobiology, we describe such Qi-chakras, as the integration of the force, the Qi with the energetics of the Sempervivum plant as a 'chakra' of a thousand Qi petals.

This chakra with a cloud-based communication is in the warmth of a Cuddlie(TM), thus creating an effective healing cuddle.

The effectiveness of this therapy in treating Autism Spectrum Disorder is the topic of an accompanying publication.

Why:

A warm cuddle from a human companion can be the best therapy, but sometimes an intelligent plant can complete any therapy, the IOT connection, and a physical Cuddlie(TM) plushie, make a plant cuddler, real in warmth and messages, messages in light and sound, this curative Qi is a part of the healing of Quantum medicine.

So What:

Plant Companions complete the therapy of human companionship, completing the healing process, this is illustrated in a case study on patients with Autism spectral disorder.

Summary:

Main Points:

Imperfection as reality, fault tolerance as a therapy.

Plant IOT and Cuddlies(TM) to complete cuddle therapy based on human relationships.

Warmth and affection for wellness, including real warmth of a Cuddlie(TM) with plant sympathy.

Applications:

Supplement and complete cuddle therapy as an integrative wellness therapy.

Code Base:

Introduction.

Cuddle Therapy is popular as an integrative therapy, (Cullen and Barlow 2002; Finke 2019; Yamada 2016; Wylie 1990; Pedersen 1992; Underwood 1999; Rosen 2017; Grader 2016; Morrison 2011) for social wellness and wellness therapy, in this paper we explore the role of Cuddlies(TM) combined with a sympathetic plant like the Sempervivum, with Qi coils and Air Pots integrated to the cloud with IoT. Using Sonoff controllers and IFTTT or RAVATTT, we make the plant communicative, more than a cuddle buddy.

In esoteric meditation, chakras are defined as the integration of the astral and causal planes, in plant neurobiology, we describe such Qi-chakras, as the integration of the force, the Qi with the energetics of the Sempervivum plant as a 'chakra' of a thousand Qi petals.

This chakra with a cloud-based communication is in the warmth of a Cuddlie(TM), thus creating an effective healing cuddle.

The effectiveness of this therapy in treating Autism Spectrum Disorder is the topic of an accompanying publication.

Problem Definition.

Creation of an IFTTT or RAVATTT based thermoregulation and plant sympathy messaging framework with IoT using Cuddlies(TM).

Background.

<original-contribution>

The Dog-Ears describes a framework (Bheemaiah, n.d.)of interfacing messaging and thermo-regulation with a framework like IFTTT or RAVATTT, enabling conversational UI and messaging with a Cuddlie(TM) and an IOT Pot with a Sempervivum plant, energized with Qi. This starts the healing and builds a real relationship with plants as companions, the induction to real people and imaginary Cuddlies(TM), from cartoon representation, are a complex (real and imaginary) aspect of life and healing relationships.

</original-contribution>

Discussion.

Imperfections are a part and parcel of life, accepting reality is part of accepting the imperfections of life, people and the planet as a part and a necessity in creation, the strive for perfection is an impossible struggle leading to unhappiness and an incomprehension of life, often leading to a dangerous fantasy-based reality as an escape, leading to complex, psychedelic escapes, egocentric abuse and a whole spectrum of psychosomatic disorders. The search for perfection, only leads to the creation of such ageless perfection in androids, a race of technology, to soon replace mankind, necessitating a synergy, healing of human company and relationships, only possible in a relation to reality, as imperfect, and as a necessary aspect of creation. Life as it is. Plants are a part of this reality and so are Cuddlies, the animatronic reality of the imagined. They complete this relationship with the real, the contentment and the higher happiness index.

Future Work.

The need for the completion of social bonding is more pertinent in the case of patients with the autistic spectral disorder, and a future publication is on the results of this case study of the use of plant and cuddle(TM) based therapy in a population of autistic patients.
